# Algorithmic game theory - Homework $3^{11}$ Coarse correlated equilibria 

assigned 28.11.2022, deadline 12.12.2022

Homework 1. Let $G=(P=\{1,2\}, A, u)$ be a normal-form game of two players with $A_{1}=\{a, b, c\} \quad a A_{2}=\{d, e, f\}$ and with the utility function from Table 1 .

|  | d | e | f |
| :---: | :---: | :---: | :---: |
| a | $(1,1)$ | $(-1,-1)$ | $(0,0)$ |
| b | $(-1,-1)$ | $(1,1)$ | $(0,0)$ |
| c | $(0,0)$ | $(0,0)$ | $(-1.1,-1.1)$ |

Tabulka 1: The game from Exercise 1.
Show that the probability distribution $p$ on $A$ with $p(a, d)=p(b, e)=p(c, f)=1 / 3$ is a coarse correlated equilibrium in $G(C C E)$, but it is not a correlated equilibrium in $G$ (CE).

Homework 2. Let $G=(P=\{1,2\}, A, u)$ be a normal-form game of two players with $A_{1}=\{U, D\}$ and $A_{2}=\{L, R\}$ with payoff function $u$ depicted in Table 2. Determine the set of all correlated equilibria of $G$.

|  | L | R |
| :---: | :---: | :---: |
| U | $(4,4)$ | $(1,5)$ |
| D | $(5,1)$ | $(0,0)$ |

Tabulka 2: The game from Exercise 2.
