# LAK tutorials 4

Martin Černý

November 4, 2022

To pass the tutorials, you have to attend all tutorials and submit (solve) at least 50% of homework assignments. There are two types of homework assignments:

- 1. A-type: You have to finish this assignment if you do not attend the tutorials,
- 2. Star-type: Throughout the semester, you have to submit (solve) at least 50% of these homework assignments.

Please, submit your solutions in PDF format to cerny@kam.mff.cuni.cz.

# A-type assignment

#### **Exercise 1**

Suppose  $A_1, \ldots, A_m$  are subsets of  $\{1, \ldots, n\}$  such that

- $|A_i| \neq 0 \mod q$  for every *i*,
- $|A_i \cap A_j| \equiv 0 \mod q$  for every  $i \neq j$ .

and let  $q = p_1 \cdot p_2 \cdot \ldots \cdot p_k$ , where  $p_1, \ldots, p_k$  are primes. Show that there is  $c(q) \in \mathbb{N}$  such that  $m \leq c(q) \cdot n$ .

# Star-type assignment

# **Exercise 2**

Suppose  $A_1, \ldots, A_m$  are subsets of  $\{1, \ldots, n\}$  such that

- $|A_i| \neq 0 \mod q$  for every *i*,
- $|A_i \cap A_j| \equiv 0 \mod q$  for every  $i \neq j$ .

Show that for every *q*, there is  $c(q) \in \mathbb{N}$  such that  $m \leq c(q) \cdot n$ .
